

Simplex two-drum winders can be used for many applications including high speed trimming and winding. They can be designed to handle large diameter rolls of both very low-tension materials, and very high-tension papers such as paperboard. The REM 2550 is ideally suited to perform these tasks, and incorporates numerous features to enhance productivity and roll handling.

2550

[maximum throughput & quality]

Driven riding roll

Relieving system for controlling roll density

Easy knife access

Dual spreader roll system assures slit separation

Cradle unloads finished rolls to floor

Load cell tension control

Unwind

Rewind

50"

Web Width

72"

Speed

2,000 fpm

Shaft Type:

- Locked Core
- Lift-out

Winding Method:

- Surface

Slitting Methods:

- Shear
- [Optional: Score]

Optional Accessories:

- Semi-automated core tuck-n-start
- Unload table used with shafted rewind
- Single motor drive for winding drums
- Line Guide
