

The REM 4520 shafted unwind stand fully compliments REM's and other manufacturer's equipment as a floor pick-up system. The mechanically linked arms pivot to the floor in order to accept a shafted roll. Once secured, the roll is then raised to a running position where the entire unit shifts laterally to ensure accurate web guiding.

4520

[shafted floor pick-up]

Shaftless design

Floor Pick-up

Ball bearing shaft latches

Pneumatic disc brake

Constant unwind tension via load cell feed back

Bag-edge adjusting idler roll
